# Surveillance Solutions Providing Peace of Mind

## END-TO-END IP SURVEILLANCE SOLUTIONS

Tel-e Connect Systems is an end-to-end video IP surveillance solution supplier. The TCSWatch solution offers professional, full-featured, high definition IP surveillance cameras, video management software and video analytics that are seamlessly unified. Our solutions are customized for all markets through the comprehensive support of pre- and post-sales service tools and utilities.

Knowing that high quality, reliable security cameras keep a vigilant eye on your facility even when you are not there can provide you with tremendous peace of mind. Investing in a scalable end-to-end solution that integrates with your existing IP network makes great business sense.

## BENEFITS OF BUSINESS IP SURVEILLANCE CAMERA SYSTEMS:

- Simplified management and cost savings
- Broad line of high quality professional IP cameras
- Proprietary switch technology to maintain video quality over shared data / video networks
- Scalable, high performance video storage options from very small to very large installations
- Onvif compliance for optimum flexibility
- Single support call troubleshooting
- Professional services for pre-sales support, installation and configuration

Tel-e Connect Systems is a fully-authorized partner of ACTi and Fortinet, providers of state-of-the-art end-to-end video IP Surveillance technologies and solutions.

## **TCS IP SURVEILLANCE CAMERAS**

TCS has a wide range of IP surveillance cameras for use in a variety of business environments such as retail, mobile vehicle, education, healthcare, residential and much more.

All of our IP surveillance cameras include an array of features such as high definition, remote control capabilities, weather and vandal proof protection, megapixel technology, infrared, pan, tilt and zoom plus integrated 2-way sound capabilities.

## **IP SURVEILLANCE CAMERA SELECTION**

### **STANDARD CAMERAS**

Standard cameras include dome, bullet, cube and box cameras with high quality fixed or vari-focal lenses and resolution up to 10 Megapixel.

Selected models include Wide Dynamic Range (WDR) technology for better image quality in scenes with high contrast between light and dark areas and Low Light Sensitivity (LLS) technology for clear visibility in low light conditions.

### **ZOOM CAMERAS**

TCS offers the widest range of optical zoom cameras in the whole industry - domes, bullets, boxes with different sizes and zoom ratio options. All the zoom cameras come with true auto focus - extremely accurate self-focusing without requiring external PC's support. You can manage zoom and auto focus either automatically, manually or by the event manager of the camera.

### **PTZ CAMERAS**

PTZ cameras and Speed Domes can turn the lens to any direction and zoom in and out either automatically or by the remote manual control. All these cameras come with built-in true auto focus and event management system. Speed Dome is a special type of PTZ camera that can do 360° endless panning. For locations requiring more compact PTZ solution, TCS offers an Outdoor Mini PTZ product line. These models can be surface or flush mounted and come with wider viewing angles.

### **OTZ CAMERAS**

OZT technology combines three valuable features - Overview, Zoom and Tracking - to be able to automatically track any suspicious object over a wide area.

### **180°/360° CAMERAS**

For locations where one camera has to cover the whole surrounding area, the panoramic camera solution is perfect. Depending on the type of panoramic camera or the method of installation, the camera can either cover the 360° or 180° surround view. TCS offers the wide range of panoramic cameras with different features and form factors for indoor and outdoor installations.

There are three different panoramic camera types to choose from - Fisheye, Hemispheric and Multi-Imager Panoramic Cameras.

# Simple & Complete Visual Coverage Inside and Out

## FORTINET NETWORK-BASED VIDEO SECURITY

### COMPLETE VIDEO SECURITY SOLUTION

Surveillance systems can be complicated, expensive, and unreliable. But FortiCamera and FortiRecorder simplify IP video surveillance and there are no license fees. With FortiCams, you can see everything: doors, POS terminals, public areas- whatever you need to keep an eye on. FortiRecorder captures the images for easy monitoring, storage, and retrieval. Just plug in your cameras, connect the FortiRecorder, open a web browser or client application, and you're ready to go. It's easy to navigate and configure with event timelines and profile-driven configuration.

FORTICAMERAS WITH FORTIRECORDER GIVE YOU EVERYTHING YOU NEED FOR COMPLETE SITE VIDEO SECURITY:

- Multiple recording options: continuous, event-based, scheduled, manual
- Access to live and recorded video from anywhere using Windows, Mac or Unix browsers, Android or iOS Mobile devices
- Recorder available as hardware or VM deployment
- Large range of cameras to fit any environment, all powered with PoE
- Free professional-grade video management system (VMS)
- RADIUS, LDAP, SNMP, and remote data storage support for flexible network integration

## FORTICAM

Get complete visual coverage inside and out with FortiCameras. With options for indoor and outdoor, vandal-proof, weatherproof, low-light night vision, fixed and motorized zoom lenses and 2-way audio, there's a FortiCam that fits every environment. All FortiCams deliver crisp, high-resolution HDTV-quality images to any FortiRecorder NVR, either continuously or triggered by a range of events, including motion and/or audio detection.

### EASY TO SET UP, LICENSE-FREE

With FortiCameras, installation is a breeze. They support PoE, eliminating the need for AC power. Just connect the camera to the FortiRecorder network via a PoE switch and you're up and running. No software installation, no patches and, unlike using third-party cameras, no license fees.

### HIGHLIGHTS:

- Scheduled and manual recording
- Motion detection and continuous recordings
- Snapshot notifications and alerts
- Web-based interface (no software installation required)
- Camera live view and video playback
- Event monitor with timeline
- RADIUS, LDAP, SNMP and remote data storage support for flexible network integration
- Powerful Windows client FortiRecorder Central
- Mobile access on iOS and Android

## FORTIRECORDER

FortiRecorders solve your surveillance problems while streamlining the user experience. Place cameras to cover your entry points and critical areas such as Point of Sale terminals, warehouses, public areas and loading docks. Configure FortiRecorder for continuous or motion-based recording (or both). Alarms and notifications keep you aware of what's going on. An event timeline lets you find and review motion events quickly and easily.

### MOTION DETECTION WITH SNAPSHOT NOTIFICATIONS

What's the most annoying issue with alarm systems? For many, it's false alarms. The alarm company called, and now you have to decide whether the alarm is legitimate. Did the cleaners forget to disarm the alarm or are thieves cleaning out your office? FortiRecorder sends a snapshot notification email to your smartphone or other device with images from the motion event. You immediately see what's going on without having to log in to a dedicated app or navigate any menus.

### HIGHLIGHTS:

- Scheduled and manual recording
- Motion detection and continuous recordings
- Snapshot notifications and alerts
- Available as an appliance or virtual machine
- Camera live view and video playback
- Event monitor with timeline
- RADIUS, LDAP, SNMP and remote data storage support for flexible network integration

### FEATURES:

#### TWO WAYS TO SEE: WEB-BASED INTERFACE OR ADVANCED FORTIRECORDER CENTRAL APP

One of the most sophisticated in the industry, the FortiRecorder features full controls for browsing past footage, setting alerts and monitoring a few cameras. Or choose the free FortiRecorder Central windows application. It's a sleek, high-performance, easily customizable interface that delivers fast, intuitive access to real time and recorded images. It's friendly and easy for casual users, but sophisticated enough for more intensive security installations that require constant monitoring of multiple cameras and recorders.

#### CAMERA FREEDOM: USE FORTICAMERAS OR THIRD-PARTY CAMERAS

FortiCameras are tailor-made to work with FortiRecorder, with easy configuration and no additional license fees. But FortiRecorder also works with third-party ONVIF cameras to allow you to choose specialty cameras when you need them.

#### APPLIANCE OR VIRTUAL: YOU CHOOSE

FortiRecorder is available as an appliance or a virtual machine, so you get the complete functionality in the format that works best for you. Choose the FortiRecorder 100D, 200D or 400D for ease of set-up right out of the box – just plug in your FortiCameras, turn on the recorder and you're ready to go using your web browser or FortiRecorder Central. Or choose FortiRecorder-VM with simple, stackable licenses and platform flexibility for IT-friendly environments and support of up to 1024 cameras.
